Professional Experience

Third Act
Mobile application developer, full-time March 2024–Present

Develops and maintains mobile applications for iOS and Android using Flutter and Dart. Works across the entire development lifecycle, including architecture, API integration, debugging, quality assurance, and production deployment.

Viking Assistance | Membership, Insurance and Payments

Tools: Flutter · Dart · Swift · Kotlin · SQLite · Azure DevOps · Postman · Crashlytics · Intercom · Worldline

- Developed and further enhanced payment, transaction, and insurance workflows within a mobile app for iOS and Android.
- Implemented data models and backend integrations, and improved user flows for memberships, payments, and insurance.
- Troubleshot and resolved production issues, and carried out platform-specific adjustments and releases for both iOS and Android.

Pigello | Requirements analysis, UX and product development

Skills: Figma · system flows · user flows · low-fidelity prototyping · user research · usability testing

Worked on two product development projects within property management: a replacement for Pigello's existing mobile app for technical property management, and a new module for digital leasing processes within the company's SaaS platform.

- Translated extensive requirement specifications into system and user flows, as well as low-fidelity prototypes for case management, routine inspections, and property inspections.
- Collaborated with a UI designer and quality-assured the detailed interface design prior to handover to the client for further implementation.
- Contributed to the foundational work for the mobile app that was subsequently launched as Pigello TF.
- Designed workflows for advertising, waiting-list management, applications, and the allocation of rental properties within a new leasing module.
- Conducted user interviews and usability testing, and participated in client meetings to ensure the solutions were aligned with the needs of both the users and the business.

Wakil Security | Mobile application development and reliable location sharing

Tools: Flutter · Dart · Swift · Kotlin · SQLite · Azure DevOps · Postman · Crashlytics · Figma

Developed a mobile security app for iOS and Android, where reliable location sharing with an emergency response centre was a core feature.

- Implemented location sharing and permission management for iOS and Android.
- Adapted background functionality to the specific technical requirements and limitations of each platform.
- Analysed and tested platform-specific behaviours to ensure consistent and predictable location sharing.
- Developed user flows for authentication and integrated the app with backend services.

Personal Projects

Mecom

2025–Present

Tools: Flutter · Dart · Drift · Git · SQLite · Supabase · Docker · PostgreSQL · Firebase · Figma

Developing a data-driven mobile application, with end-to-end responsibility for UX/UI, application architecture, mobile development, and backend, as well as managing app distribution via App Store Connect and Google Play Console.

- Designed a local-first architecture using Drift and SQLite for local storage, alongside Supabase and PostgreSQL for cloud-based data.
- Modelled relational data and implemented atomic database transactions to ensure the reliable handling of interconnected operations.
- Developed synchronization between the local database and the backend, ensuring user data remains up-to-date and accessible across multiple devices.
- Implemented authentication, backend integrations, and the management of user-specific data.
- Responsible for the product's technical structure and user experience—from initial concept through to functional implementation and deployment.

Education

Stockholm University
Computer and Systems Sciences, specialisation in Digital Media

August 2021–June 2024

Tools: Java · C# · HTML · CSS · JavaScript · Unity · Unreal Engine 5 · Maya · Substance Painter · Figma

Bachelor's Programme in Digital Media at the Department of Computer and Systems Sciences (DSV), Stockholm University.

An interdisciplinary bachelor's programme focused on programming, interactive systems, human-computer interaction (HCI), and digital media technology.
