Arbetslivserfarenhet

Third Act

Mobile Application Developer, Full-time

March 2024 - Present

Development and maintenance of mobile applications for iOS and Android using Flutter and Dart. Involved throughout the development lifecycle, including architecture, API integrations, debugging, quality assurance, and production releases.

Viking Assistance | Membership, Insurance & Payments

Flutter Dart Swift Kotlin SQLite Azure DevOps Postman Crashlytics Intercom Worldline

Responsible for the development and release processes of a mobile application that enables customers to manage memberships, insurance policies, payments, and roadside assistance services.

- Developed and maintained payment, transaction, and insurance workflows in a mobile application for iOS and Android.
- Designed and improved structures for presenting and managing information within the application.
- Integrated application functionality with backend services through APIs.
- Managed testing and releases to the App Store and Google Play.

Pigello | Requirements Analysis, UX & Product Development

Figma System Flows User Flows Low-Fidelity Prototypes, User Research Usability testing

Worked on two product development projects within property management:
1) A replacement for Pigello's existing mobile application for technical property management.
2) A new module for digital rental processes within the company's SaaS platform.

- Translated extensive requirements specifications into system flows, user flows, and low-fidelity prototypes.
- Conducted user interviews and usability tests, and participated in client meetings to align solutions with user and business needs.
- Collaborated with a UI designer and contributed to design quality assurance.

Wakil Security | Mobile Development & Location Sharing

Flutter Dart Swift Kotlin SQLite Azure DevOps Postman Crashlytics Figma

Developed a mobile security application for iOS and Android, with reliable location sharing as a core feature.

- Adapted background functionality to platform-specific technical requirements and limitations.
- Investigated, analyzed, and tested OS-specific behaviors to ensure consistent and predictable location sharing.
- Developed user flows for SMS-based authentication and payment integration via M-Pesa, a mobile payment service in Kenya.

Personal Projects

Mecom

2025-Present

Flutter Dart Drift Git SQLite Supabase Docker PostgreSQL Firebase Figma

Developing a data-driven mobile application with end-to-end responsibility for UX/UI, application architecture, mobile development, backend development, and soon to be distributed via the App Store and Google Play Console.

- Designed a local-first architecture using Drift and SQLite for local storage, with Supabase and PostgreSQL for cloud-based data storage.
- Modeled relational data and implemented atomic database transactions to ensure data integrity across related operations.
- Developed synchronization between the local database and backend to keep user data up to date and accessible across multiple devices.
- Implemented authentication, backend integrations, and user-specific data management.
- Responsible for the product's technical architecture and user experience, from initial concept through implementation and distribution.

Education

Bachelor's Degree in Computer and Systems Sciences
Specialization in Digital Media

August 2021 - June 2024

Java C# HTML CSS JavaScript Unity Unreal Engine 5 Maya Substance Painter Figma

Bachelor's degree program: Digital Media, at the Department of Computer and Systems Sciences (DSV), Stockholm University.

A three-year university education focusing on programming, interactive systems, human-computer interaction, and digital media technologies
